HireHub

Software Test Plan

Prepared for: SQA Engineer Assessment

Application URL: hirehub-client-mauve.vercel.app

Version 1.0 | Date: 02 July 2026

1. Document Control

Document Title	HireHub – Software Test Plan
Product	HireHub Recruitment Platform
Prepared By	SQA Engineer (Candidate) – Monoara Moni
Reviewed By	—
Version	1.0
Test Plan Date	02 July 2026
Assessment Deadline	4 days from task receipt

2. Introduction

This Test Plan defines the scope, approach, resources, and schedule for testing the HireHub recruitment platform, prepared as part of the DataPollex Ltd. Software Quality Assurance (SQA) Engineer assessment. It complements the accompanying Test Scenario document, Test Case document, and Bug Report.

HireHub is a recruitment ecosystem that simplifies hiring for recruiters, improves job discovery for candidates, and provides monitoring tools for administrators. It supports three user roles — Admin, Recruiter, and Candidate — along with guest (unauthenticated) access to the public job board.

3. Objectives

- Validate that HireHub's core functional modules work as intended across all three user roles and the guest flow.
- Identify functional, UI/UX, validation, boundary, negative, security, and role-based access defects.
- Verify data consistency across the candidate application lifecycle, from submission through to Offered/Rejected status.
- Assess authentication, authorization, and session-security controls.
- Produce a comprehensive, traceable set of test scenarios and test cases, and a clearly documented bug report to support engineering triage.

4. Scope

4.1 In Scope

- Authentication & Security: Sign Up, Sign In, JWT sessions, protected routes, password change, RBAC.
- Public Job Board: guest browsing, search, filters, job details, guest application workflow.
- Candidate Portal: dashboard, application tracking, profile management, settings.
- Recruiter Portal: dashboard, job management (create/edit/delete), application management, company profile.
- Admin Portal: dashboard, analytics, user management.
- Application Lifecycle: status transitions and cross-role data consistency.
- Additional Features: unique application tracking ID, optional fields, guest vs. logged-in applications.
- Cross-browser (Chrome) and responsive (desktop/mobile) UI verification.

4.2 Out of Scope

- Formal load, stress, and performance benchmarking (only basic performance observation is included).
- Native mobile app testing (web responsiveness only).
- Third-party integrations not exposed in the current build (e.g., payment gateways, external ATS sync).
- Backend/database internal unit testing, code-level review, and infrastructure penetration testing beyond black-box security checks.

5. Test Approach / Strategy

Testing will be conducted using manual, black-box techniques against the live Vercel-hosted build. The following test types will be applied across all in-scope modules:

Test Type	Purpose
Functional Testing	Verify each feature behaves according to the requirements in the assessment brief.
Negative Testing	Verify the system handles invalid input, broken flows, and unexpected user actions gracefully.
Boundary Testing	Verify behaviour at minimum/maximum limits (field lengths, numeric limits, file sizes, % caps).
Validation Testing	Verify client-side and server-side validation of form fields and data formats.
Role-Based Access Testing	Verify Admin/Recruiter/Candidate permissions are correctly enforced and cannot be bypassed.
Security Testing	Verify protection against unauthorized access, token tampering, XSS, and SQL injection.
UI/UX Testing	Verify layout, responsiveness, navigation, and visual consistency across devices.

Test execution will follow this sequence: (1) Review requirements and prepare Test Scenarios, (2) Derive detailed Test Cases from each scenario, (3) Execute test cases against the live application, (4) Log defects for every failed case with full reproduction evidence, (5) Summarize results in the Test Case and Bug Report documents.

6. Test Environment

Application URL	https://hirehub-client-mauve.vercel.app/
Browser	Google Chrome (latest) – Desktop
Mobile Viewport	412 x 915 (e.g., Samsung Galaxy S20 Ultra) via Chrome DevTools / physical device
Hosting	Vercel
Test Data	Seeded/dummy platform data plus tester-generated records

6.1 Test Credentials

Role	Email	Password	Login URL
Admin	admin@hirehub.com	123456789	/sign-in
Recruiter	recruiter@hirehub.com	123456789	/sign-in
Candidate	candidate@hirehub.com	123456789	/sign-in

7. Roles and Responsibilities

Role	Responsibility
SQA Engineer (Tester)	Prepare test scenarios/cases, execute tests, log and report defects, produce final submission documents.
Development Team (DataPollex)	Review reported defects, provide fixes/clarifications, support retesting cycles.
Hiring Panel / Reviewer	Review submitted Test Plan, Test Scenarios, Test Cases, and Bug Report for the assessment.

8. Entry and Exit Criteria

8.1 Entry Criteria

- The assessment brief and application URL/credentials have been received.
- The HireHub application build is accessible and stable enough to log in with all three test roles.
- Test Scenario and Test Case templates are ready for documentation.

8.2 Exit Criteria

- All planned test scenarios have been translated into test cases and executed at least once.
- All identified defects are logged in the Bug Report with severity, priority, and reproduction steps.
- Test Case and Bug Report summaries (pass/fail counts, severity distribution) are finalized.
- Deliverables are submitted before the 4-day deadline via the provided submission form.

9. Test Deliverables

1. Test Plan (this document).
2. Test Scenario Document (Excel).
3. Test Case Document (Excel).
4. Bug Report Document (Excel).
5. Supporting screenshots / screen recordings for reported defects.

10. Test Schedule

Day	Activity
Day 1	Requirement review, environment setup, Test Plan and Test Scenario preparation.

Day	Activity
Day 2	Test Case design for all modules (Home, Auth, Public Job Board, Candidate, Recruiter, Admin).
Day 3	Test execution across all roles and devices; defect logging as issues are found.
Day 4	Regression spot-checks, finalize Bug Report and summaries, package and submit deliverables.

11. Defect Management Process

Every defect found during execution is logged in the Bug Report with a unique Bug ID, Title, Module, Severity, Priority, Environment, Preconditions, Steps to Reproduce, Expected Result, Actual Result, and supporting Screenshot/Video evidence.

11.1 Severity Definitions

Severity	Definition
Critical	Core functionality is broken or blocked (e.g., Sign Up fails, application submission fails, security bypass).
High	Major feature is missing or not working as expected, with a significant impact on user workflow.
Medium	Feature works but with a noticeable defect that degrades the experience (e.g., data mismatch, missing filter).
Low	Minor/cosmetic issue with minimal functional impact (e.g., broken image, label inconsistency).

11.2 Priority Definitions

Priority	Definition
Critical	Must be fixed immediately; blocks further testing or release.
High	Should be fixed before the next release cycle.
Medium	Should be fixed, but can be scheduled in a subsequent iteration.
Low	Fix when convenient; no urgent business impact.

12. Risks and Mitigation

Risk	Mitigation
Live/shared environment contains dummy or corrupted seed data, obscuring real defects.	Note data-quality issues separately from functional defects; retest with clean input where possible.
Backend write operations fail due to read-only file system errors on the hosted environment.	Log as a environment/infrastructure defect with full reproduction evidence; flag as blocking for dependent test cases.
Limited assessment window (4 days) constrains exhaustive coverage.	Prioritize Critical/High-severity workflows (auth, application submission, RBAC, security) first.

Risk	Mitigation
No staging/sandbox separate from the live build.	Avoid destructive actions where irreversible; document any test data created for cleanup.

13. Tools Used

- Google Chrome (DevTools for responsive/mobile emulation and network inspection).
- Microsoft Excel / Google Sheets for Test Scenario, Test Case, and Bug Report documentation.
- Screen capture tools (e.g., Lightshot, Loom) for evidence collection.

14. Approval

This Test Plan is submitted as part of the HireHub SQA Engineer assessment deliverables, alongside the Test Scenario, Test Case, and Bug Report documents, for review by the DataPollex Ltd. hiring panel.
